**Intersection Improvement for Boone Road**

The existing intersection of Boone Road and South Wilson Road is hazardous. As illustrated on **Map 12**, the angle of intersection is approximately sixty (60) degrees and is at a steep grade. The proposal is to relocate and reconstruct the intersection so that the angle of intersection is ninety (90) degrees with South Wilson Road and in direct alignment with the improved W.A. Jenkins Road. W.A. Jenkins Road provides access to three schools and connects with North Dixie Highway (US 31W). This new intersection would provide for a future connection with the proposed E2RC which is designed to intersect with Boone Road.
